Porsche Consulting

Our Understanding

Porsche Consulting GmbH is committed to the responsible and sustainable use of natural resources.

As an internationally active consulting company, we assume ecological responsibility throughout our entire value chain. This includes the sustainable design of our internal operational processes, environmentally conscious mobility of our employees, and consideration of the ecological impact of our consulting services.

The aim of this policy is to establish a systematic environmental and energy management system focused on continuous improvement. We strive to minimize environmental impact, increase energy efficiency, and integrate innovative solutions to promote sustainable development.

Our Principles Include »

ENVIRONMENTAL AND ENERGY GOALS

We continuously analyze the environmental impact of our business activities and make it measurable. Based on these insights, we define transparent and objective goals. Our key environmental and energy indicators are published annually to document progress in a traceable manner.

DECARBONIZATION

We are committed to the Paris Climate Agreement and have developed scientifically grounded climate targets (validated by SBTi).

We consistently align our business activities with the goal of limiting global temperature rise. We continuously work to improve our energy performance and reduce our CO₂ emissions.

Our Principles Include ≡

ENVIRONMENTAL PROTECTION & RESOURCE CONSERVATION

We are aware of the ecological impact of our activities—both at our own locations and at our clients' sites.

Therefore, we are committed to the responsible use of resources such as energy, water, and materials. Our measures include:

- 01 The preferred procurement of energy-efficient products and services, provided they contribute to improving energy performance and are economically viable
- 02 The climate-friendly operation of our German locations through the use of certified green electricity
- 03 Compliance with our waste policy, aiming to reduce waste, increase the recycling rate, and minimize ecological impact
- 04 Promotion of biodiversity wherever possible within the scope of our business activities

Our Principles Include ≡

LEADERSHIP BEHAVIOR

Our leaders actively contribute to the implementation of this policy.

Within their areas of responsibility, they create the necessary framework conditions, raise employee awareness of environmental and energy issues, and ensure that all involved are appropriately qualified.

COMPLIANCE

We comply with all relevant legal requirements as well as our self-imposed commitments.

As part of our environmental and energy management system, we ensure that binding requirements are identified, considered, and implemented.

We promote an open corporate culture in which environmental and energy topics can be addressed at any time.
